## USB-485-Emerson

The USB-485-Emerson is an isolated USB to RS422 or RS485 converter. It is ideal for laptops which do not have a physical serial port and cannot be used with a conventional interface converter. The USB port also provides sufficient power for a full-spec RS422 or RS485 interface capable of driving termination resistors and long cables.

- Interfaces between a USB port of a Windows computer and an Emerson / Control Techniques drive
- Galvanic isolation is 100% tested at 1500V AC RMS
- Powered entirely from USB port
- Up to 115kbps data rate; all valid Win32 baud rates are supported
- Drivers for Windows 98, ME, 2000, XP, Vista, Win7 and Win8
- Unique USB device ID - non-varying COM port number
- Drive-specific software available from Emerson / Control Techniques
