

# SUPPORT - SERVICE

## **subject: APN configuration and settings for the mobile network in The Netherlands**

Internet via a mobile data network? Than first you need the name to have access to the network: the APN (Access Point Name).

This opens the door of the mobile telephone network to the internet.

You need 3 things: APN, username (account name) and password. These common details will be stored under a profile name.

The standard access number is \*99# (some times it is a different number).
